备注：1. 节省费用为暖阳地暖中央空调与传统燃气取暖和电取暖方式对比。以浙江区域为例，按100m²采暖面积，采暖周期120天，平均消耗热量36W/m²，暖阳s125机型按国标更严苛测试实际能效超过3.50，同等热量测算。（以上为理论计算，不同品牌及实际运行为准）
2. -27°C低温强热数据来源于合肥通用机械产品认证有限公司检测，报告编号：GC24TX001000027。
3. -37°C低温制热和动态双补气增焓科技为暖阳s产品独有。

GLC被背包式智能变频泵组

通过Bell & Gosset变频控制器，可为HVAC暖通应用提供可变流量水泵。
配合无传感器控制技术的专用控制器（Tech5500 Plus），可实现变流量和无传感器曲线控制的节能效果，在低流量时提供关闭功能，同时减少了采用有线传感器的部署成本和时间。其优点为：

- 集成多泵控制功能，无需额外控制柜，减低投资成本
- 背包式安装，无需单独变频柜，节省占地空间
- 内置水泵保护，进行流量补偿及低流量保护
- 自动能量优化，提高系统效率

同时泵组配置的具有Xylem专利设计（专利号为：U.S Patent #10,240,611）的入口扩散器，使泵进口的流态更均匀，水力损失较小，以确保泵的高效运行。此外，大大节省了安装空间和安装材料，与传统的安装相比，省去了Y形过滤器，进口长直管段，长径弯头和变径弯头，大大地降低了碳排放。同时其内部结构使完全可拆卸的，使现场服务更快捷。

新一代免监检蒸汽发生器

固耐德·30年锅炉制造经验

特制大比例阀/故障率低

11排冷凝回收装置/减少热损耗

自主研发低氮火排/低氮排放

直流风机/风量更大更稳定

安全免监检

有炉无“锅”，安全可靠，没有爆炸风险。实测水容积低于30升，免监检免办锅炉证件，单台最大功率2.2吨。

节能高效

采用独立模块组工作设计，按需供能，避免“大马拉小车”，达到热能利用不浪费。灵活布局就近安装，节省蒸汽管道热损耗及投资成本。

低氮环保

自创“直流蒸汽发生技术”，5秒即出蒸汽，足额蒸发量，实测NOx排放<30mg/m³，满足当地严苛的排放标准，无惧第三方环保检测。

高压/低压高温

蒸汽压力可达1.2Mpa，客户可根据需求使用饱和蒸汽或者高温蒸汽。低压环境下，蒸汽温度依然可达170-230℃。

Welcome to ISH China & CIHE 2024 - China International Trade Fair for Heating, Ventilation, Air-Conditioning, Sanitation and Home Comfort System. In recent years, the Chinese Government has introduced a number of policies promoting energy-efficient and environmentally-friendly buildings. This, coupled with the ongoing recovery of the consumer market, has steered the construction industry towards low-carbon development. As a result, it heightened the demand for advanced, energy-efficient HVAC products and technologies. This year we are committed to continue to offer valuable insights into the latest market trends and opportunities, while also promoting the industry to adopt clean, innovative, diverse and more comfortable HVAC energy solutions.

Recognised as a leading event in its field, ISH China & CIHE connects leading enterprises from within China and abroad every year. This edition, we are excited to welcome 1,100 exhibitors, showcasing the latest innovations and trends in HVAC, plumbing, smart heating and home comfort systems to an anticipated crowd of 75,000 professional visitors across 106,000 sqm of exhibition space. The show once again centres around the three themes of "Energy", "Water" and "Life", encompassing HVAC, heat pumps, air-conditioning, plumbing, intelligent heating, and home comfort systems.

To support the entry of international HVAC businesses into the Chinese and Asian markets, we have reinstated the Overseas Area, Germany Area, Canada Pavilion, Zhejiang Pavilion, Clean Energy District Heating Area, and added a dedicated pavilion for Italy. These pavilions are designed to assist rising enterprises in presenting their latest technologies to the regional market and securing business partners in China with the aid of our on-site business matching services.

Attendees can also look forward to close to 100 fringe events, featuring insightful presentations and discussions led by foremost industry experts and scholars from around the world. Several must-attend sessions include the China International HVAC Congress - International Summit of the Future Development of Low Carbon Energy & The 2nd Sino-Finnish Energy Day, "Leveraging Heat Pumps for New Quality Productive Forces" Technology Forum & the "2023 China Heat Pump Industry Development Yearbook" Launch Ceremony, The 1st International Heat Technology Forum, The China District Heating Industry Achievements Showcase, the Release of the 2023-2024 Thermal Storage Development Report and the National Home Comfort System skills Competition & Heating and Cooling System Hands-on Activity, alongside a series of presentations on new technologies and product launches.

We would like to express our sincerest gratitude to our esteemed co-organiser, CIEC GL events (Beijing) International Exhibition Co Ltd, for their ongoing partnership and trust. Finally, to all exhibitors, visitors, supporters and the media, thank you for making the fair successful year after year. We wish you all an enjoyable and rewarding experience over the next three days.

Dear colleagues in the industry,

Hello, everyone! Welcome to ISH China & CIHE.

In 2023, we moved forward despite the wind and rain, and had overcome a series of difficulties and achieved due results. We are more confident about the future. After the epidemic prevention and control entered a new stage, China's economy continued to improve and high-quality development moved forward steadily. The rapid advancement of smart heating and green heating had contributed industry strength to the progress of China's "double carbon" goal.

The year 2024 marks the 75th anniversary of the founding of New China. We will comprehensively implement the new development concept, accelerate the construction of a new development pattern, and promote the high-quality development of clean heating work. China Heating Exhibition will launch a series of high-level forum activities for the HVAC comfortable home industry around the development of new quality productivity, and build a higher level of display and exchange platform for the industry.

The guidance of the "double carbon" goal, the demand of urban and rural residents for a better home life, and the trust and support of the majority of exhibitors and friends have jointly promoted the healthy development of this exhibition. All of these make this year's exhibition area break through 100,000 square meters.

Thanks friends from all walks of life for the continuous concern and help of ISH China & CIHE over the years. I wish all exhibitors in this exhibition to get a good display effect, the audience friends to find excellent products and potential business opportunities. And wish you all a wonderful time in Beijing.

high-quality polyester-grade ethylene glycol, with a
purity of over 99.9%. It features optimal initial boiling
point, small density range and outstanding prevention
against evaporation, little depletion and long service
life. Jaminton heat-conducting antifreeze has large
specific heat capacity, outstanding heat conducting and
exchanging properties, as well as slower temperature
reduction and greater released heat than other heat-
conductive mediums. It effectively increases the
thermal efficiency of heating equipment. Jaminton
heat-conductive antifreeze uses deionized water to
inhibit scale formation, and incorporates antirust
agent and anti-scale agent to prevent pipelines from
becoming difficult to clean up or blocked. Jaminton
heat-conductive antifreeze has rather high boiling
points so that it can be used with peace of mind in
high-temperature systems. Jaminton heat-conductive
antifreeze is non-toxic, odorless and non-volatile, without
any adverse effects on human body. It is suitable for
heating equipment such as air source heat pump, solar
heat pump, central air conditioner and floor heating.*

1. 导电浆料: 本产品主要针对锂离子电池正极材料开发的高性能的导电添加剂, 在正极匀浆过程中添加此产品, 可在极片中形成高效的导电网络结构, 降低极片电阻率, 提高电池循环寿命以及倍率性能。2. 热管理膜石墨烯发热膜在通电的情况下, 发热膜中的碳分子在电阻中产生离子和电子, 由产生的碳分子之间相互摩擦、碰撞而产生热能, 热能以波长在8-14微米的远红外线辐射出来, 电能几乎全部转化为热能(可高达99%)。石墨烯作为“黑金”材料发展趋势日益凸显, 烯谷碳源成功掌握石墨烯在发热膜导热浆料中的关键技术, 让发热膜升温快、安全等其他性能得到整体的提升。发热温度高低可分为高温、中温、低温, 10-220V可定制电压, 可实现5s-2min可控升温至30-80°C发热范围。

1. Conductive paste: This product is mainly aimed at the high-performance conductive additives developed by the cathode material of lithium ion battery. Adding this product in the process of positive electrode homogenization can form an efficient conductive network structure in the pole sheet, reduce the resistivity of the electrode sheet, and improve the cycle life and multiplier performance of the battery. 2. Thermal management membrane graphene heating film In the case of electrification, the carbon molecules in the heating film produce ions and electrons in the resistance, and the heat energy is generated by the friction and collision between the generated carbon molecules. The heat energy is radiated by the far infrared at the wavelength of 8-14 microns, and almost all the electric energy is converted into heat energy (up to 99%). The development trend of graphene as a "black gold" material is increasingly prominent. The carbon source has successfully mastered the key technology of graphene in the heating film conductive slurry, so that the heating film and other properties are improved. The heating temperature can be divided into high temperature, medium temperature and low temperature. 10-220V can be customized by voltage, which can realize the controllable temperature increase of 5s-2min to the heating range of 30-80°C.

松花地漏是浙江松花科技有限公司研发, 拥有自主知
识产权的新颖地漏 -- 采用“磁极正方向同步原理”: 同
时利用同极相斥、异极相吸原理来进行地漏排水道反
向密封的工作, 该技术原理可保证密封盖在上下移动
过程中所受到的作用力保持均衡、稳定, 不会出现波
动, 从而可有效增大密封盖的下移距离、提升排水速
度, 同事保证在排水过程中密封盖的及时复位, 保证
密封盖和地漏体出水口有效密封、杜绝密封盖复位失
效现象的发生、保证地漏正常的防臭效果。
Songhua floor drain is a novel floor drain developed by
Zhejiang Songhua Technology Co Ltd with proprietary
IP, using the "magnetic pole square synchronization
rationale", while utilizing the rationale of polar repulsions
and polar attractions for reverse sealing of floor drainage
channel. This technological rationale can assure the
force borne by the sealing cover remains balanced
and stable in the course of upward and downward
movement without fluctuations, thus effectively
increasing the downfall distance of sealing cover and
the drainage speed while ensuring timely replacement
of the sealing cover in the drainage process, ensuring
effective sealing of the sealing cover and drain outlet,
eliminating the failed replacement of sealing cover, and
assuring the normal anti-odor effects of floor drain.
